

STOP a beautiful 80 acre agricultural property on the Naramata Bench from becoming a Compost/Biosolids Waste Facility, PLEASE!

Published by Jacquie Jackson on 13th Sep 2023

A.

- The RDOS (Regional District of South Okanagan) purchased 80 acres of farmland at 1313 Greyback Mountain Road, Penticton BC in 2020.
- The RDOS applied to the Agricultural Land Commission (ALC) to have 55 acres removed from the Agricultural Land Reserve (ALR).
- The ALC denied the RDOS's application in 2021.
- The RDOS appealed the ALC's decision in 2022.
- The ALC denied the appeal in 2023.

B.

• Now the RDOS wants to rezone the non-ALR portion of 1313 Greyback Mountain Road (the remaining 25 acres) from 'Resource Area (RA)' to 'Resource Area Site Specific (RAs)'. The change, if adopted, would permit:

1. A composting operation as a principal use and
2. Public maintenance and works yard as an accessory use.

• If this First Phase goes through then:

3. The RDOS wants to build a Biosolids (sewage sludge) facility on the property.

• These potential facilities would service a HUGE area requiring trucking from these destinations to the site forcing the large trucks to go through school zones, residential neighborhoods, and playgrounds emitting exhaust, emissions, and sewer odors all the way, both ways.

• The list of areas potentially served - Penticton, Keremeos, Cawston, Lower Similkameen, Rural Oliver, Skaha East, Okanagan Falls, Naramata, Greater West Bench, Rural Summerland, Okanagan Lake West, Rural Keremeos, Hedley, Olalla, Skaha West, Kaleden & Apex.

• In an Article dated August 16, 2016 from the Centre for Sustaining Agriculture and Natural Resources (CSANR) (<https://csanr.wsu.edu/biosolids-benefits-risks/>): Paragraph #6. Caroline Snyder says: "August 18, 2016 at 7:19 pm. There is nothing "sustainable" about spreading biosolids on the land where we grow our food. This contaminated pollutant-rich mixture contains more than nutrients. As all the previous commentators have pointed out, it contains hundreds of persistent pollutants that accumulate in soil until the land is so polluted it can no longer grow most crops. This is not a potential scenario. It has already happened, e.g. in Augusta GA. For facts, rather than myths about the many risks linked to biosolids use, see <http://www.biosolidsfacts.org>".

• In that same Article dated August 16, 2016: Paragraph #10. Don Vincent says: "July 9, 2018 at 9:18 am. It is so important to understand that sewer sludge aka biosolids is NOT just human excrement - it is a concentration of all domestic and industrial pollutants that go down drains and sewers. It has some good stuff in it, which plants can use, but a huge load of thousands of other contaminants. ... It is true that biosolids contain beneficial elements like phosphorus, nitrogen, organic matter and trace nutrients. But the benefits derived from introducing those components to the soil via biosolids are by far overshadowed by the detrimental effects of toxins and pollutants that comprise the vast majority of the biosolids content."

C.

- These 25 acres are home to diverse and fragile wildlife, including plants, reptiles, and mammals, many of which are endangered/threatened. "The South Okanagan Valley is one of the 4 most endangered ecosystems in Canada" and, in general, we are "the region with the most endangered, threatened and rare species in the province. The South Okanagan is home to 30 percent of BC's Red-listed wildlife species, and 46 percent of the province's Blue-listed species".

- Among MANY others, the land in question is home to:

1. The Greyback Elk Herd, numbering approximately 250, calves on this very spot every spring.
2. The California Bighorn Sheep no longer occurs in many areas of the Okanagan because of degradation of habitat, changes in predation mortality, and historical over-harvest by legal or illegal hunting. Land development is just one of many factors that have limited access for the sheep to forage for plants. Sheep survival depends on familiarity with their habitat and they are slow to re-occupy vacant habitats.
3. The Northern Pacific Rattlesnake is only found in BC and is one of only three remaining rattlesnake species in Canada.

D.

- These 25 acres have their downstream watershed/riparian area to the east which serves as a crucial source of water for sustaining agriculture, wildlife, and human consumption for the surrounding properties.

- With 3 drinking water wells located directly downstream and within the same aquifer, the facility's potential discharge and runoff have a high likelihood of introducing harmful pollutants and toxins into the immediate area, posing a severe risk to the overall water quality.

- This could result in detrimental consequences for both human health and other diverse lifeforms that depend on this riparian area.

Many, MANY people are opposed to this application by the RDOS. To "join the fight", PLEASE sign this petition and SHARE it with everyone in your network. ACT NOW! Together, we can make a difference.

We, the undersigned, oppose the application by the RDOS (Regional District of Okanagan Similkameen) to re-zone 1313 Greyback Mountain Road, Penticton BC from 'Resource Area (RA)' to 'Resource Area Site Specific (RAs)' to put a stop to the building of a compost facility, public maintenance and works yard and a biosolids (sewage sludge) facility.

2	We do not need to destroy prime agriculture land that is home to so many endangered species. These facilities would be seen across the valley and would be a blight on the beautiful Naramata Bench.	Alix	MacDonald	Penticton	BC	V2A 8T3	Canada	Sep 14, 2023
3	The entire thing - existing landfill and anything new - needs to be moved to a different location. Instead of adding to an already contentious and, apparently, ill-functioning and too small facility - MOVE it All away from natural habitats, recreational and soon to become more residential dense area.	[REDACTED]	[REDACTED]	Penticton	BC	V2A 8T4	Canada	Sep 14, 2023
4	Mr	Marc	Hubbard	Penticton	BC	V2A 8T3	Canada	Sep 14, 2023
5	There has been two previous attempts to redone this parcel of land and has been turned down, the values of this agricultural land has not changed and this new application should also be turned down	George	Nidery	Penticton	BC	V2A8T3	Canada	Sep 14, 2023
6	Mr	[REDACTED]	[REDACTED]	Penticton	BC	V2A 8T3	Canada	Sep 14, 2023

8	Mr	Gary	Giesbrecht	Penticton	British Columbia	V2A8V2	Canada	Sep 14, 2023
9	RDOS out of control. Think they can do whatever they want. Save the ALR .	Michele	Curley	Penticton	BC	V2A 8T4	Canada	Sep 14, 2023
10	Mrs.	Chris	Curley	Penticton	BC	V2A 8T4	Canada	Sep 14, 2023
11		Gjoa	Taylor	Penticton	British Columbia	V2A 8T6	Canada	Sep 14, 2023
12	This is a gorgeous piece of agricultural land. Having biosolids shipped from 8 different RDOS districts will increase the traffic on this tiny, road that will spill down onto reservoir road, upper bench and Vancouver Avenue. Given all the development on Naramata Road, and the large, construction vehicles already on Naramata Rd., this will just be another strike against our area. Hardly the thing an agritourism area needs at the beginning of the Naramata Bench. While I feel that a compost facility is a good idea, given this is the calving ground for the last herd of Elk in the region, it is not the right spot. The RDOS should be more open about what is happening with this facility. Even the Mayor of Penticton appears to be in the dark given his recent speech at the Reservoir Road development hearing on Sept 12/23. Lets have transparency from our elected officials and let the public participate in decisions that impact where they live.	Jordan	Lacroix	Penticton	BC	V2A 8T4	Canada	Sep 14, 2023

23	Pam	Willis	Penticton	PENTICTON	BC	V2A 8T3	Canada	Sep 15, 2023
24	Too small an area allowed when considering restrictions to setbacks. Susceptible to downstream water pollution. You have already bought one polluted property. Publish your environmental impact studies. Prove to us that this will not harm the valley.	Grant	Willis	Penticton	BC	V2A 8T3	Canada	Sep 16, 2023
25	This has been an illogical proposal from the beginning. The RDOS stated they had no alternative sites for composting . The Kruger family offered a site in Marron valley and for no apparent reason this was turned down. This site would have been more centrally located on safer roads and lower operating costs. You need to explain yourself better to the electorate. The discussion about both the landfill and the composting site, and how they are linked needs to be part of an open discussion if you expect support.	Ryan	McNichol	Penticton	Bc	V2A 8T4	Canada	Sep 18, 2023

	this is incredibly irresponsible. It is time the RDOs and the City of Penticton make plans to find another site for our landfill/biosolids facility. this is not only a massive eye sore with the city promoting active development around the whole site...this has now contaminated a number of down slope properties that have been kept under wraps. This also needs to come out as to the current contamination of the down slope properties. We need a new and better solution to this growing environmental disaster.

95	Mr			Penticton	British Columbia	V2A8T3	Canada	Oct 02, 2023
	In addition to the comments listed there is a major safety issue with the increase in large industrial trucks on Reservoir Road. These trucks are travelling at high speed in an area where there are many individuals with their children accessing the Cambel Mountain trail system. These trucks have reduced braking and cornering compared to a motor vehicle. With the blind corners, weather conditions and the steep grades associated with Reservoir Road there is high potential for a serious accident with increased industrial use in a recreation area.							
96	Mr.	Cameron	Morrell	Penticton	BC		Canada	Oct 03, 2023
	I support the creation of a bio solids facility, but NOT at this location. A new location should be found for both the landfill and a bio solids/composting facility. This new location should be inland, away from existing agriculture and the lakes. By choosing Greyback Mountain as a location for bio-solids, you will institutionalize garbage processing at this mountain location for generations, instead of adhering to the landfill's projected closing date. Expanding Greyback's role as a trash centre would be bad policy and will lead to increased degradation of the Naramata Bench, our farms, and our waterways. Please consider the landfill and biosolids facility as one problem that needs solving. That means removing all garbage facilities from Greyback and moving them to a more remote location inland. If that were done, you could restore the landfill to rolling parkland for walkers, cyclists, and city dwellers.: a win-win for all.

107	Mr.	Duncan	McCowan	Penticton, BC	BC.	V2A 8T6	Canada	Oct 04, 2023
108	Mr			Penticton	British Columbia	V2A4P3	Canada	Oct 04, 2023
	The Agricultural Land Commission (ALC) has stated that this is not a good location for this compost facility. After the ALC denied the RDOS request and then denied the appeal of RDOS, the RDOS has decided its experts are better than the ones with the ALC. This will do harm to the Greyback Elk Herd and harm the surrounding area. Find another location.							
109		Nicole	Hackworth	Naramata	BC	V0H 1N0		Oct 04, 2023
	I disagree with a biosolids facility on this environmentally sensitive air land. Uphill from agricultural lands and on calving area's historically used by elk herds. There is a better place to home this waste facility than this area here.							
110	Mrs			Penticton	Canada	V2A 8T8	Canada	Oct 04, 2023
111				Penticton	BC		Canada	Oct 04, 2023
	Careless use of land that holds a great deal of animal welfare within it. Interesting how nothing has been in the media about it until now.							
112				Naramata	BC		Canada	Oct 04, 2023
113	Ms	Kirsten	Robertson	Naramata	BC	V0H1N1	Canada	Oct 04, 2023
	Please do not destroy this incredible natural space we are so fortunate to be able to access so close to town. I am 100% against destroying this important wildlife habitat. I am 100% against increasing large truck traffic up Reservoir Road. I lived on McMillan Ave for 14 years and the amount of truck traffic has increased significantly and has become very loud and dangerous. Part of the reason we moved. I am 100% against poisoning this land and the surrounding area with toxic bio-solids and stinky compost. This type of facility belongs in an Industrial zoned area, not in a fragile wildlife habitat. Please, do the right thing and protect this Penticton gem for future generations!
